The REACH Group First to Launch Technical Limits Software

REACH Efficiency and Valuation Software (REVS) Eliminates Unnecessary Computer Time

May 8, 2003, Houston, TX – The REACH Group announces the launch of the first software program designed specifically for Technical Limits. Technical Limits is a performance enhancement tool used in the oil and gas industry. The REACH Efficiency and Valuation Software (REVS) is a powerful project management tool that is fully compatible with the procedures and processes of Technical Limits methodology. It is the only software that integrates all elements of the Technical Limits process.

REVS offers Technical Limits tracking, analysis, graphing and reporting applications. It features full database capabilities that enable companies to create a knowledge bank of lessons learned that is accessible to all employees. The database also has e-mailing capabilities. All data can be export to MS Excel if necessary.

REVS produces a wide variety of Technical Limits reports including status reports, Workshop sheets, Planning Meetings, DO sheets and After Action Reviews. Its advanced graphing features include the graphing of Non-Productive Time (NPT), Invisible Lost Time (ILT) and operational comparisons to make it easier to achieve “best in class”.

Mark Sprague, Managing Director, of The REACH Group says, “Drilling teams waste too much time on the computer configuring their applications to comply with Technical Limits methodology. REVS has been designed for people to spend less time on the computer and more time with the people at the work level.”

REVS has the look and feel of a web browser like MS Explorer and can reside as a stand-alone PC-based application on a company intranet. It is menu-driven and anyone can create reports, charts or email lessons learned by simply pointing and clicking. Highly customizable, users can add logos or change appearances. The REACH Group will market REVS to the oil and gas Industry.

The launch of REVS strategically differentiates the REACH Group from other Technical Limits implementers as clients benefit by receiving a complete solution. Companies that use the REACH Group to implement their Technical Limits program will have free usage of REVS software for the duration of the project.
