

A Drilling Contractor's World Class Safety Culture Leads to Record-Breaking Well Results

The REACH Group team spends eight weeks on-site with rig crew members and leadership, coaching them on using their Safety Management System tools to create a World Class Safety Culture.

Challenge

The Drilling Contractor needed to safely relocate the Client Operator's new walking rig from Corpus Christi, Texas to Brooklyn, Pennsylvania, crewed-up, rigged-up and ready to spud in less than 45 days.

Solution

Recognizing the need for a safe and efficient operation, the Drilling Contractor partnered with REACH to ensure adherence to their own Safety Management System, with the goal of establishing a safe and efficient culture.

Facilitated by REACH Safety Performance Coaches with support from the Drilling Contractor's Management team, the two-day Workshop oriented the new crews, the Client Operator's team members, and all contractors to the Drilling Contractor's Safety Management System. Coupled with eight weeks of on-site coaching at the rig, the team clearly understood the process, committed to a safe operation and put their newly honed knowledge to use.

Results

The Drilling Contractor successfully achieved the mission in 38 days – **7 days ahead of schedule without incidents.**

Upon completion of the two-day workshop, the rig commenced drilling. The dedication of the entire team supported by REACH resulted in completing the first well with no incidents or spills in 19.2 days. But they were just getting started! The second well – also incident and spill-free – was completed in 14.7 days. **No contractor working for the client operator had ever completed a first well in less than 28 days.**

BRIGHTER THINKING NETS SUPERIOR RESULTS

THE GRAPH DEMONSTRATES HOW APPLYING A WORLD CLASS SAFETY CULTURE ALLOWED THE DRILLING CONTRACTOR TO COME IN SIGNIFICANTLY UNDER AFE ON THEIR FIRST THREE WELLS.
